NGAME-CM

NGAME-CM watches a QuickBooks Online ledger from a small computer that remains on and is completely unattended. Once each evening it takes a picture of the day's activity in the books and compares that picture with what has been normal for that organization.

If the day's picture looks meaningfully unusual, the financially responsible person (FRP) gets a text or an email. That rare event is the FRP's cue to view the picture's warning level and then to view QuickBooks Online's Audit Log for further details. On a quiet night NGAME-CM sends nothing. Nobody has to log in, press buttons or navigate folders or files to make the picture happen.

NGAME-CM is strictly a surveillance engine that monitors transactions, detecting suspicious transaction activity and issuing warnings along with their levels of severity. It does not see every save nor does it identify the user. It does not read the QuickBooks Audit Log but prompts the FRP with actionable information so as prevent "warning fatigue."
